                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene="recF"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .4437
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          misc_feature
      /note="Revool," (MT001, MTV029.01, P49993), len: 507 aa. dnaA, chromosomal replication initiator protein (see citations below), equivalent to other Mycobacterial CHROMOSOMAL REPLICATION INITIATOR PROTEINS e.g. CHROMOSOMAL REPLICATION INITIATOR PROTEINS e.g. P46388 DNAA MYCDA from Mycobacterium leprae (502 aa); P46388 DNAA MYCDA from Mycobacterium paratuberculosis (509 aa); P49992 DNAA MYCDA from Mycobacterium meegmatis (504 aa); P49992 DNAA MYCDA from Mycobacterium sucium (508 aa); P49992 DNAA MYCDA from Mycobacterium sucium (504 aa); P49992 DNAA MYCDA from Mycobacterium sucium (608 aa); P49992 DNAA MYCDA from Mycobacterium sucium (608 aa); P69992 DNAA STRRE from Mycobacterium sucium (643 aa); OSZH76 DNAA STRRE from Streptomyces reticuli (643 aa); DNAA ECOLI P03004 B3702 chromosomal replication initiator protein from Escherichia coli strain K12 (467 aa); PASTA soverlap); etc. Contains PS00017 ATP/GTP-binding site motif A (P-loop) and PS01008 DNAA protein signature. BELONGS TO THE DNAA FAMILY. Note that the first base of this gene has been taken as base 1 of the Mycobacterium tuberculosis H37RV genomic sequence."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /function="PLAYS AN IMPORTANT ROLE IN THE INITIATION AND REGULATION OF CHROMOSOMAL REPLICATION. BINDS TO THE ORIGIN OF REPLICATION; IT BINDS SPECIFICALLY DOUBLE-STRANDED DNA AT A 9 BP CONSENSUS (DNAA BOX): 5'-TTATC(C/A)A(C/A)A-3'. DNAA BINDS TO APP AND TO ACIDIC PHOSPHOLIPIDS. hypotherical protein (see Salazar et al., 1996), highly
similar, but longer 21 aa in N-terminus, to
AAF33696.1|AF222789 unknown protein from Mycobacterium
avium subsp. paratuberculosis (166 aa); and highly similar
to NP 301132.1|NC 002677 conserved hypothetical protein
from Mycobacterium leprae (189 aa); 570990 hypothetical
protein from Mycobacterium smeqmatis (194 aa). Also highly
similar, except in N-terminal part, to

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Droscophila Genome Project (BDGP). The BDGP is constructing a physical map of the Droscophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Droscophila melanogaster BAC library was prepared by Kazutcyo Geogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Droscophila DNA provided by the BDGP from the Engle and EST library is named RPCI-98 and was constructed by partial EcoRI digestion of Droscophila DNA provided by the BDGP from the BDGP's pl and EST library is named RPCI-98 and was constructed by partial sogenic strain v2; on bw sp, the same strain used for the BDGP's pl and EST library is named RPCI-98. The same strain and how to order individual BAC clones, the entire library, or filters for hybridization from the BACFAC Resource Center can be located the page of the found at http://bacpac.med.buffalo.edu/droscophila_bac.htm.

BP 191 91006 EVRY cedex - FRANCE (E-mail: seqrefégenoscope.cns.fr - Web: www.genoscope.cns.fr - Web: www.genoscope.cns.fr - Genermination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs: For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RECI-99 and was constructed by partial BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pland by to corder individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BAGe. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCORI digestion of Prosophila DNA provided by the BDGP from the isogenic strain v2: cn bw sp, the same strain used for the BDGP's pland and EST libraries. A more detailed description of the library

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billand at CEPH (Centre droid et Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheron and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        304 CATCATCCCGGTGACGTCATCTCGGTGACCTGGCAAACCAAGTCGGGCGGCACGCGTACA 363

This sequence is the direct result of the Base calling software
Phred (default parameters). It is the raw base calls. To aid in the
identification of the high quality insert the software Lucy
(default parameters) has been run on this sequence. Lucy identified
the region [28, 831].
Plate: L48003 row: H column: 15.

The first four come from removing plants from vermiculite (7 day old plants) and incubating them at 20°C on the bench without water for 1, 2, 3 and 4 days. The last four come from plants grown in soil in a growth chamber after watering is terminated. Four samplings were taken in a two week period; the first after wilting was observed and the last, two weeks later, consisted of live crown and stem tissue (lasf tissue was yellow and dead). First strand synthesis in this library was done in the presence of methylated dCTP thereby protecting from internal cleavage with Notl."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    538 bp. mRNA linear EST 23-OCT-2001

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecot at ST library is named RPCI-98 and was constructed by partial Ecot RST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be content of Location/Qualifiers
